

EQUATIONS GOVERNING OUR 2 MONTHS AT THE DARPA INNOVATION HOUSE
SPIKING RETINA —STDP—> LEAKY INTEGRATE-AND-FIRE NEURON WITH LATERAL INHIBITION

Gar Kenyon

Gerd Kunde

Pete Schultz

Keni Patel

Dylan Paiton

Sheng Lundquist

Average spike count over interval τ :

$$n_i^\tau(t + \Delta t) = e^{\frac{-\Delta t}{\tau}} [A_i(t) + n_i^\tau(t)] \quad (1)$$

Average firing rate over interval τ :

$$f_i^\tau(t) = \frac{n_i^\tau(t)}{\tau} \quad (2)$$

Feed-forward excitatory weight adaptation (STDP):

Pre before post is ', pre after post is ''

$$Q_{ij}(t + \Delta t) = Q_{ij}(t) + \beta \left(\frac{\Delta t}{\tau_{oja}} \right)^2 \{Oja * LTP - LTD\}$$

i.e.

$$\begin{aligned} Q_{ij}(t + \Delta t) = Q_{ij}(t) + \beta \left(\frac{\Delta t}{\tau_{oja}} \right)^2 \{ \\ n_{Y_j}^{\tau_{oja}}(t) \left[n_{X_i}^{\tau_{oja}}(t) - \frac{Q_{ij}(t)}{W_{scale}} n_{Y_j}^{\tau_{oja}}(t) \right] \cdot \lambda' A_Y(t) n_{X_i}^{\tau'}(t) \\ - \lambda'' A_{X_i}(t) n_{Y_j}^{\tau''}(t) \} \end{aligned} \quad (3)$$

Feed-forward inhibitory weight adaptation (STDP):

Pre before post is ', pre after post is ''

$$Q_{ij}(t + \Delta t) = Q_{ij}(t) + \beta \{PreAfterPost('') - PreBeforePost(')\}$$

i.e.

$$\begin{aligned} Q_{ij}(t + \Delta t) = Q_{ij}(t) + \beta \{ \\ \lambda_j'' A_{X_i}(t) n_{Y_j}^{\tau''}(t) \\ - \lambda' A_Y(t) n_{X_i}^{\tau'}(t) \} \end{aligned} \quad (4)$$

Adaptive λ_D for feed-forward weights

$$\lambda_j^D = \lambda_j''$$

$$\lambda_j^D(t + \Delta t) = \lambda_j^D(t) + \frac{\Delta t}{\tau_{thr}} \left[f_j^{\tau^o}(t) - f_o \right] \frac{\lambda^{Dscale}}{f_o} \quad (5)$$

where

$$\lambda_j^D > 0$$

$$\lambda_j^D(0) = \lambda^{Dinit}$$

Lateral inhibition:

$$w_{jk}(t + \Delta t) = w_{jk}(t) + \frac{\Delta t}{\tau_{inh}} \left[f_j^{\tau^{int}}(t) f_k^{\tau^{int}}(t) - f_o^2 \right] \frac{1}{f_o^2} \quad (6)$$

Current scales for τ values

$$\tau_{oja} \approx 50 - 200ms$$

$$\tau_P \approx 0 - 10ms$$

$$\tau_D \approx 20 - 40ms$$

$$\tau_{int} \approx \tau_{oja}$$

$$\tau_o = 300$$

$$\tau_{thr} \gg \tau_o$$

$$\tau_{inh} \gg \tau_{int}$$

(7)

Current values for constants:

$$\lambda_P \approx 1$$

$$\lambda_{Dscale} \approx \lambda_P$$

$$\lambda_{Dinit} \approx 1$$

$$\beta = 2$$

$$\alpha_{dec} = 0$$
